FitBuddy – Python & Project Setup Guide

1. Install Python & Pip

Ensure Python and pip are installed on your system.

2. Create Virtual Environment

```
python -m venv fitbuddy-env
fitbuddy-env\Scripts\activate  (Windows)
```

3. Install Required Libraries

```
pip install fastapi uvicorn jinja2 sqlalchemy python-multipart google-generativeai
```

4. Run Server

```
uvicorn app.main:app --reload
```

Visit **http://127.0.0.1:8000** for the app and **/docs** for API testing.

5. Set Up Project Structure

Create the following folders for the project:

```
/app                # Python files
/templates          # HTML files
/static/images      # Assets
```

Project Structure

```
FitBuddy/
■■■ app/
■   ■■■ (Python files)
■■■ templates/
■   ■■■ (HTML files)
■■■ static/
    ■■■ images/
        ■■■ (assets)
```
