Designing and Developing the User Interface

Story Duration: 30m

Set Up the Base HTML Structure

• Developed **index.html** as the main entry point for user input.

• Structured the form to capture: **username, user_id, age, weight, goal, and intensity.**

• Each field is properly labeled and grouped using semantic HTML.

• The design uses a gym-themed background image, Google Fonts (Roboto), and bold typography to create a clean, fitness-oriented interface.

• Navigation is kept minimal for focus, and the user flow directs clearly from input to output.

Design a Responsive Layout Using CSS

• Embedded CSS styles were applied directly in each HTML file.

• Layouts use Flexbox to center content both vertically and horizontally.

• Media queries ensure mobile responsiveness.

• Buttons have consistent styling with hover effects.

• Input fields and result blocks have adequate padding, shadows, and rounded corners for modern aesthetics.

• Overall color scheme supports readability on a dark background.

Create Separate Pages for Each Core Functionality

Three Jinja2-powered HTML templates were created under **/templates**:

• **index.html:** A user input form with fields for fitness goal, intensity, and basic personal information.

• **result.html:** Displays the 7-day AI-generated workout plan, a nutrition tip, and accepts user feedback.

• **all_users.html:** Admin panel to view and delete users and review both original and updated plans.

• Templates are modular, and UI transitions smoothly between steps.

• Forms are submitted to specific FastAPI endpoints via POST methods.
